

**Notes:**

Do not scale from this drawing.

The steps need to connect a raised decking level that is 1.6m high. The angle of the stairs needs to pitch at 42 degree to accommodate the clients metal balustrade.

The client supplied deck boards are Gripsure Pro brown smooth treated 150mm x 32mm with a 6mm gap.

A balustrade will be constructed with a Q Deck Handrail with infill, reusing existing metal spindles.

The steps will be 1450mm wide so will use 3no stringers to support this.
